From installation to finishing, a dedicated and innovative solution for each application

Tarkett Sports provides you with a comprehensive solution for your sports facility including installation kits and finishing accessories.

With its complete range of tools, Tarkett Sports meets users' needs:

- ensuring quicker and simpler installation for installation teams
- easier cleaning for maintenance teams
- better accessibility, comfort and security for players.

Skirtings

What is a skirting?

A skirting is a board to cover the joint between the wall surface and the floor. A skirting protects the wall from shocks and can serve as a decorative molding. A skirting allows movements of wooden floors and subconstructions.

TARKETT SPORTS' SKIRTINGS SOLUTIONS:

- Tarkett Sports has designed specific skirtings adapted to each sports surface:
- Wood skirtings for our S'Match-it and Lumaflex ranges
 - PVC skirtings for our Omnisports range

Wood ventilated skirtings for S'Match-it and Lumaflex ranges

A design solution

Tarkett Sports has developed its skirtings with the same wood species as its S'Match-it solutions. Varnished and ready to be installed, these tools provide the perfect homogenous design solution and ensure the durability of the floor.

Ventilated skirtings

During the manufacturing process, spaces are made which allow cross ventilation of the wood sub construction. This system of ventilation is necessary to have some air moving and helps the wood breathe.

2 dimensions:

- └ 47 x 47mm for arenas for which the expansion gaps, next to the walls, are smaller or equal to 30m
- └ 70 x 47mm for arenas for which the expansion gaps, next to the walls, are wider than 30m (it means that the 70mm of the skirting has to overlap the wooden flooring)
- └ Standard length: 2350 mm

PVC skirtings for Omnisports range

Exclusive design - Non ventilated skirtings for Omnisports installations

Tarkett Sports has designed its PVC skirtings according to its Omnisports colours. This Tarkett Sports' innovation provides the best solution in terms of design aspect.

- └ For Omnisports installation
- └ Available in Omnisports colours

Trapdoors

What is a trapdoor?

The trap door is an accessory that facilitates access to an anchoring point or to a technical area.

TARKETT SPORTS' TRAPDOOR IS MADE UP OF TWO PARTS:

It includes a ring that is glued to the wood floor (S'Match-it) or wood sub-construction (Lumaflex) and also a cover top.

For Wood S'Match-it surfaces

For S'Match-it range, the cover top is filled in with wood (Oak, Beech, Maple) during manufacturing.

- └ Available in oak/beech/maple
- └ Available in two inside diameters:
 - 170mm
 - 90mm
- └ No hole in the middle/suction pad on request

For Lumaflex installation

For Lumaflex Omnisports / Linosport, the PE cover top will be filled in with the same material as the sports surface (Omnisports or Linosport) during installation. An adapted and integrated sealing joint ensures an easy cleaning and prevents moisture (Lumaflex).

- └ Invisible (full system under the Omnisports/Linosport)
- └ Thinner for easier Lumaflex installation
- └ Available in two widths (inside):
 - 180mm
 - 90mm

GreenLay installation kit

Targlue and Targun

RANGE FEATURES

COST-EFFECTIVE

Called GreenLay, Tarkett Sports' PVC loose lay installation is a unique process invented in 1995 by Tarkett. Its aim is to facilitate and reduce installation time for standard glued installations.

ALL-INCLUSIVE SOLUTION

As the inventor of GreenLay 16 years ago, Tarkett Sports has developed a specific range of installation tools:

GreenLay glue

With GreenLay, 98% of the surface is adhesive-free. Tarkett Sports provides a glue specifically adapted to this type of installation.

GreenLay tape

GreenLay double side tape is aimed to stabilize two PVC roll edges in order to weld the rods.

RANGE FEATURES

EASY AND QUICK INSTALLATION

ALL INCLUSIVE INSTALLATION KIT

Targlue (PU mastic glue) and Targun have been specifically designed for the installation of Multiflex M. Used together, Targlue and Targun installers to fix the Tarflex subconstruction with the 14 mm multilayer.

Double-tape unroller for Table Tennis solution

This kit was specially designed for table tennis solution temporary solution. Tarkett Sports unroller enables the application of double-tape and the assembly of the two PVC rolls.

EASY AND QUICK INSTALLATION

REDUCES THE RISK OF MUSCULOSKELETAL PROBLEMS FOR INSTALLERS
